📍 Bangalore, India

First things first. I'm an Indian citizen, and would need sponsorship for a Blue Card for this role.

I'm at a point in my career where I want to experience a different engineering culture. I know that Germany has a great reputation for the design and construction of their physical products, and am hoping that that will carry over to software products made there.

I've worked in a big company, and experience the pros-and-cons of that. The benefits being, following a proper decision making process, and being very thorough about verification, and ultimately, reliability.

The drawback has been, lots of internal orchestration, and slow velocity. I've also done open-source work in a tiny team, and seen a breakneck speed of implementation -- often without thinking of the consequences. I'd ideally like something in between now.

I can do application logic, I know standard application development patterns, I follow TDD and progressive deployment. Those are table stakes for any software job.

I'd like to work with engineers who are both senior and junior to me. I think I have experiences to share with juniors, and I enjoy talking to senior folks. Mentorship is something I'd like to be involved in.

I'm not researching every company, and don't have an answer for why specifically your company. I'm hoping that will reveal itself in the interview process, that both I and you feel like working together. Why not give it a shot?
